Wireframe Design

1. Login Page

Title: Bank Name
Purpose: Allow users to log in to their accounts securely.

plaintext
Copy code

```
+------------------------------------+
|             Bank Name              |
+------------------------------------+
|            Login Form              |
| +------------------------------+   |
| | Email                    |   |
| +------------------------------+   |
| +------------------------------+   |
| | Password                 |   |
| +------------------------------+   |
| [  Login Button  ]                 |
|                                    |
| Don't have an account? [Signup Here] |
+------------------------------------+
```

Key Features:

1. **Input Fields**: Email and password.
2. **Action Button**: Login.
3. **Link**: Redirect to the Signup page.

2. Signup Page

Title: Bank Name
Purpose: Allow users to create an account.

plaintext
Copy code

```
+-------------------------------------+
|              Bank Name              |
+-------------------------------------+
|            Signup Form              |
| +-------------------------------+   |
| | Name                      |   |
| +-------------------------------+   |
| +-------------------------------+   |
| | Email                     |   |
| +-------------------------------+   |
| +-------------------------------+   |
| | Password                  |   |
| +-------------------------------+   |
| [   Signup Button   ]               |
|                                     |
| Already have an account? [Login Here]|
+-------------------------------------+
```

Key Features:

1. **Input Fields**: Name, email, and password.
2. **Action Button**: Signup.
3. **Link**: Redirect to the Login page.

---

3. Dashboard Page

Title: `Welcome, [User's Name]!`
Purpose: Display user-specific data such as account balance and recent transactions.

plaintext
Copy code

```
+-------------------------------------+
| Welcome, [User's Name]!             |
+-------------------------------------+
| Account Balance: $[XXXX.XX]         |
```

```
+------------------------------------+
| Recent Transactions                |
| +--------------------------------+ |
| | - Deposit $200                 | |
| | - Withdrawal $50               | |
| | - Transfer $100                | |
| +--------------------------------+ |
+------------------------------------+
| [Logout Button]                    |
+------------------------------------+
```

Key Features:

1. **Greeting**: Personalized welcome message with the user's name.
2. **Account Information**: Display of account balance.
3. **Transaction History**: Recent transactions listed in reverse chronological order.
4. **Action Button**: Logout.

Wireframe Flow

1. User Journey

1. **Login Page**:
   - User enters email and password and clicks **Login**.
   - If valid, redirects to **Dashboard**.
   - If invalid, shows an error message.
2. **Signup Page**:
   - User enters name, email, and password and clicks **Signup**.
   - On success, redirects to **Login Page**.
   - On failure, shows an error message.
3. **Dashboard**:
   - User sees their account balance and recent transactions.
   - Logout ends the session and redirects to the **Login Page**.

Additional Notes for Styling

- **Consistency**:

- ○ Use the same color palette and font family across pages.
- **Responsiveness**:
  - ○ Ensure the layout adapts for mobile devices (e.g., smaller screens).
- **Accessibility**:
  - ○ Add labels for input fields and maintain high color contrast for readability.
